Dear Steve:

Enclosed are the results of Operable Unit 3 Bethpage Park Groundwater Containment System (OU3 BPGWCS) operation and monitoring, performed in accordance with the NYSDEC-approved OU3 Groundwater IRM OM&M Manual (ARCADIS 2009) and the NYSDEC-approved Sampling and Analysis Plan (SAP; ARCADIS 2009). As we have transitioned to electronic submittals (via PDF) as part of ongoing sustainability and cost savings efforts, hard copies of the report can be provided on request.

If you have any questions, please do not hesitate to contact us.

Sincerely,

Arcadis of New York, Inc.

David E. Stern

Senior Hydrogeologist

Legend:

-  Indicates system online for at least the majority of the day.
-  Indicates system operated with reduced flow rates.
-  Indicates system off-line for at least the majority of the day.
- # Indicates water compliance samples were collected.
- ## Indicates water performance samples were collected.
- \*\* Indicates vapor compliance samples were collected.
- \* Indicates vapor performance samples were collected.
- b Indicates filter bag unit changed over.
- K Indicates PPZ change-out.
- C Indicates carbon change-out.

Acronyms\Key:

- 1Q first quarter
- ECU emission control unit
- VPAC vapor phase granular activated carbon
- PPZ potassium permanganate-impregnated zeolite
- RW recovery well

Table 1  
Operational Summary, Bethpage Park  
Groundwater Containment System, Operable Unit 3  
(Former Grumman Settling Ponds), Bethpage, New York

---

**Notes:**

- (1) Days in which the system was operational for the majority of the day are counted as one day.
- (2) Spent bag filters are stored in DOT certified 55-gallon drums and disposed of by a subcontractor as non-hazardous waste.

**First Quarter 2016**

- (3) The system shut down at 7:32 pm on January 6, 2016 due to a motor overload condition at RW-2. After an attempt to restart by resetting the breaker at RW-2, the system was left offline. The alarm was cleared and the system was restarted at 8:40 am on January 7, 2016, however RW-2 was left offline. The system was offline for approximately 13 hours.
- (4) The system shut down at 9:09 pm on January 16, 2016 due to a motor overload condition at RW-3. The breaker at RW-3 was reset, the alarm was cleared, and the system was restarted at 11:18 am on January 17, 2016. The system was offline for approximately 14 hours.
- (5) The system was shut down at 9:00 am on January 27, 2016 to install a new pump and motor in RW-2. The system was restarted at 3:50 pm the same day and was offline for approximately 7 hours. RW-2 was offline for a total of 21 days.
- (6) The system shut down at 6:40 pm on February 13, 2016 due to overvoltage from the power supply. The system was restarted at 7:10 am on February 14, 2016 following voltage normalization and was offline for approximately 12.5 hours.
- (7) The system shut down at 9:50 am on February 20, 2016 due to overvoltage from the power supply. The system was restarted at 11:50 am on the same day following voltage normalization and was offline for approximately 2 hours.
- (8) The system shut down at 4:33 pm on March 20, 2016 due to a bag filter differential high pressure alarm resulting from multiple bag filter changes. The alarm was cleared, both of the bag filters changed and the system restarted at 10:12 am on March 21, 2016. The system was offline for approximately 18 hours.
- (9) The system shut down at 7:11 am on March 23, 2016 due to a low flow alarm at the RW-2 influent manifold. The alarm was cleared and the system was restarted at 8:08 am on the same day, however RW-2 was left offline. The system was offline for approximately 1 hour.
- (10) The system shut down at 4:00 am on March 26, 2016 due to a low pressure alarm at the RW-2 influent manifold. The system was restarted at 10:45 am the same day, and was offline for approximately 7 hours.
- (11) First quarter air and water sampling was completed on April 1, 2016 due to downtime associated with RW-2 in March.

 Influent Vapor Sample Analytical Results,  
 Bethpage Park Groundwater Containment System,  
 Operable Unit 3 (Former Grumman Settling Ponds),  
 Bethpage, New York. <sup>(1)</sup>

**Notes and Abbreviations:**

- (1) Vapor samples collected by ARCADIS on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per Modified USEPA Method TO-15. A VOC analyte list is provided in the Groundwater IRM OM&M Manual (ARCADIS 2009). Influent samples were collected at Vapor Sampling Port-1 (VSP-1); refer to Figure 3 of this OM&M Report for the location of VSP-1.
- (2) "Total VOCs" represents the sum of individual concentrations of compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.
- (3) First Quarter samples were collected on April 1, 2016 due to RW-2 downtime in March.

- 700** Bold value indicates a detection.
- D Compound identified from secondary dilution.
- ELAP Environmental Laboratory Approval Program
- IRM interim remedial measure
- J Compound detected below its reporting limit; value is estimated.
- ND Analyte not detected at or above its laboratory reporting limit.
- NYSDOH New York State Department of Health
- OM&M operation, maintenance, and monitoring
- SPDES State Pollutant Discharge Elimination System
- TIC tentatively identified compound
- USEPA United States Environmental Protection Agency
- VOC volatile organic compound
- µg/m<sup>3</sup> micrograms per cubic meter
- < 5 U Compound not detected above its laboratory quantification limit.

**Notes and Abbreviations:**

- (1) Vapor samples collected by ARCADIS on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per Modified USEPA Method TO-15. A VOC analyte list is provided in the Groundwater IRM OM&M Manual (ARCADIS 2009). Effluent samples were collected at Vapor Sampling Port-5 (VSP-5); refer to Figure 3 of this OM&M Report for the location of VSP-5.
- (2) Discharge limit is compound-specific SGC per the NYSDEC DAR-1 AGC/SGC tables revised February 28, 2014.
- (3) First Quarter samples were collected on April 1, 2016 due to RW-2 downtime in March.
- (4) An SGC was not provided in the DAR-1 AGC/SGC Tables, dated February 28, 2014. An interim SGC was developed based on guidance of the New York State DAR-1 Guidelines for the Control of Toxic Ambient Air Contaminants, 1991 edition. Interim SGC = (smaller of Time Weighted Average [TWA] - Threshold Limit Value or TWA - Recommended Exposure Limit)/4.2.
- (5) "Total VOCs" represents the sum of individual concentrations of all compounds detected. The values used in calculations referenced in this report have been rounded to the nearest whole number.

<b>700</b>	Bold data indicates that the analyte was detected at or above its reporting limit.	NYSDEC	New York State Department of Environmental Conservation

**Notes and Abbreviations:**

- (1) Represents operating period between consecutive monitoring events.
  - (2) Volume of groundwater recovered is based on individual local well totalized flow readings. Listed value is the difference between totalized flow values recorded between consecutive monitoring events. The total groundwater recovered during a given operating period is the sum of the individual well flow totals. Values shown are rounded to the nearest gallon, but should only be considered accurate to two significant figures to account for error associated with field measurements.
  - (3) Mass recovered per well was calculated by multiplying the Total VOC concentration from the most recent sampling event by the number of gallons extracted during the reporting period. The total amount recovered during a given operating period is the sum of masses recovered from each of the individual wells. Values less than ten pounds are presented using two significant figures and values greater than ten pounds have been rounded to the nearest whole number; however, these values should only be considered accurate to two significant figures to account for error associated with field measurements and analytical data.
  - (4) Mass recovery rates were calculated by dividing the total mass recovered for each well and for the system by the number of days in the respective operating period. Values are presented using two significant figures.
  - (5) "Total VOCs" represents the sum of individual concentrations of the VOCs detected.
  - (6) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethylene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and xylenes-o,m, p.
  - (7) "Non-Project VOCs" represents the difference between Total VOCs and Project VOCs.
  - (8) Values based on operational data recorded prior to system startup on July 21, 2009.
  - (9) The volume of groundwater recovered and mass recovered calculations represent the operational period between January 1, 2016 and April 1, 2016.
  - (10) The volume of groundwater recovered and mass recovered calculations represent the operational period between January 1, 2016 and April 1, 2016.
  - (11) "Total" refers to the amounts removed by the Operable Unit 3 Bethpage Park Groundwater Containment System.
- gal           gallons

Table 9  
 SCREEN3 Model Input and Outputs,  
 Bethpage Park Groundwater Containment System,  
 Operable Unit 3 (Former Grumman Settling Ponds),  
 Bethpage, New York.

**Notes and Abbreviations:**

- (1) The stack air flow rate (in scfm) and temperature were measured using inline instrumentation. Stack air flow rate was measured at the blower effluent location. Temperature was measured at the ECU effluent location.
- (2) The stack air flow rate at the stack temperature (in acfm) was calculated by dividing the stack air flow rate in scfm by the ratio of the standard temperature to the actual stack gas exit temperature in degrees Rankine.
- (3) The ambient temperature was recorded from the weather.newsday.com and/or weather underground (www.wunderground.com) websites for Islip, New York. The mean actual temperature from the website(s) was used in model calculation.
- (4) The receptor height corresponds to the average inhalation level.
- (5) SCREEN3 calculated constituent concentration at listed conditions at the specified inhalation level.
- (6) A USEPA time averaging conversion factor of 1/0.08 was used to convert the 1-hour maximum concentration output to an annual average.
- (7) Average annual constituent concentration at the receptor height was calculated by multiplying the one hour maximum concentration by the annualization factor.
- (8) SCREEN3 calculated distance to the 1-hour maximum concentration.
- (9) This data was not recorded for the 8/19/2015 event. Data from 8/24/2015 was used instead.
- (10) This data was not recorded for the 4/1/2016 event thus data from 4/5/2016 was used.

Table 10

Maximum Allowable Stack Concentration Calculations  
Bethpage Groundwater Containment System  
Operable Unit 3 (Former Grumman Settling Ponds),  
Bethpage, New York.

**Notes and Abbreviations:**

- (1) Actual effluent concentrations are analytical results from air samples collected on the dates shown.
  - (2) Compound-specific AGC values per the NYSDEC DAR-1 AGC/SGC tables, revised February 28, 2014.
  - (3) Maximum allowable stack concentrations were calculated by dividing the product of the annual guideline concentration of a compound and the ratio of the SCREEN3 gas emission rate and the SCREEN3 average concentration at receptor height by the air flow rate at the stack temperature and multiplying by the appropriate conversion factors.
  - (4) Percent of MASC was calculated by dividing the actual effluent concentration by the MASC for a given monitoring event.
- $\mu\text{g}/\text{m}^3$  micrograms per cubic meter  
AGC annual guideline concentration  
MASC maximum allowable stack concentration

Table 11  
 Concentrations of Volatile Organic Compounds in Groundwater  
 Samples Collected from Remedial Wells,  
 Bethpage Park Groundwater Containment System, Operable Unit 3, (Former Grumman Settling Ponds)  
 Bethpage, New York.

**Notes and Abbreviations:**

- (1) Water samples collected by ARCADIS on the dates shown and submitted to a NYSDOH ELAP certified laboratory for VOC analyses per NYSDEC ASP 2005, Method OLM 4.3 (prior to September 1, 2014) and per USEPA Method 8260C (after September 1, 2014). Results validated following protocols specified in Sampling and Analysis Plan in the December 2009 OM&M Manual (ARCADIS 2009). See previous quarterly reports for historical analytical results.
- (2) "Total VOCs" represents the sum of individual concentrations of the VOCs detected.
- (3) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-trichloroethane; 1,1-dichloroethane; 1,2-dichloroethane; 1,1-dichloroethene; tetrachloroethene; trichloroethene; vinyl chloride; cis-1,2-dichloroethene; trans-1,2-dichloroethene; benzene; toluene; and xylenes-o,m, and p.

	Indicates an exceedance of an SCG.
<b>700</b>	Bold data indicates a detection.
ASP	analytical services protocol
ELAP	Environmental Laboratory Approval Program
NYSDEC	New York State Department of Environmental Conservation.
NYSDOH	New York State Department of Health
SCGs	standards, criteria, and guidance values
VOC	volatile organic compound
µg/L	micrograms per liter
--	not analyzed
NE	not established
J	Compound detected below its reporting limit; value is estimated.
< 5; <5 U	Compound not detected above its laboratory quantification limit.

Table 13  
Water-Level Elevations,  
Bethpage Park Groundwater Containment System,  
Operable Unit 3 (Former Grumman Settling Ponds), Bethpage, New York.

**Notes and Abbreviations:**

- (1) Baseline readings were taken prior to system startup, which occurred on July 21, 2009.
- (2) Measurement collected is believed to be anomalous.
- (3) Well casing is broken and blockage exists at around 2 feet below top of casing.
- (4) RW-3 water level measurement collected on September 9, 2010.
- (5) Wells installed by ERM in 2015.
- (6) Wells recently repaired and to be surveyed.
- (7) Well screen is blocked.
- ft msl feet relative to mean sea level
- NM not measured

Table 14  
Concentrations of Volatile Organic Compounds  
and 1,4-Dioxane in Groundwater Samples Collected  
from Monitoring Wells,  
Bethpage Park Groundwater Containment System,  
OU3 (Former Settling Ponds) Bethpage, New York.

Table 14  
Concentrations of Volatile Organic  
Compounds and 1,4-Dioxane in Groundwater  
Samples Collected from Monitoring Wells,  
Bethpage Park Groundwater Containment  
System, OU3 (Former Settling Ponds)  
Bethpage, New York.

**Notes and Abbreviations:**

- (1) Results validated following protocols specified in Sampling and Analysis Plan in the December 2009 OM&M Manual (ARCADIS 2009).
- (2) Samples analyzed for the TCL VOCs using NYSDEC ASP 2005 Method OLM4.3 (prior to November 2014) and per USEPA Method 9260C (after November 2014). Samples analyzed for 1,4-Dioxane using USEPA Method 8270 SIM.
- (3) "Total VOCs" represents the sum of individual concentrations of the VOCs detected. TVOCs were rounded to two significant figures.
- (4) "Project VOCs" represents the sum of individual compound concentrations of 1,1,1-Trichloroethane; 1,1-Dichloroethane; 1,2-Dichloroethane; 1,1-Dichloroethene; Tetrachloroethene; Trichloroethene; Vinyl Chloride; cis-1,2-Dichloroethene; trans-1,2-Dichloroethene; Benzene; Toluene; and Xylenes-o,m, and p.

*italicized indicates most recent data*

	Indicates an exceedance of an SCG.
Bold value	indicates a detection.
NYSDEC	New York State Department of Environmental Conservation.
TCL	Target compound list.
VOC	Volatile Organic Compound.
ASP	Analytical services protocol.
SCGs	Standards, criteria, and guidance values.
µg/L	Micrograms per liter.
USEPA	United State Environmental Protection Agency.
SIM	Selective Ion Monitoring
NE	Not established.
E	Concentration for the constituent exceeded the calibration range.
J	Value is estimated.
D	Constituent identified from secondary dilution.
R	Concentration for the constituent was rejected.
B	Compound detected in associated blank sample.
< 5	Compound not detected above its laboratory quantification limit.
REP	Field replicate QA/QC sample
--	Not analyzed

Notes:

- (1) Results validated following protocols specified in Sampling and Analysis Plan in the December 2009 OM&M Manual (ARCADIS 2009).
- (2) Samples analyzed for the metals using EPA Method 6010.
- (3) Samples collected with HydraSleeve™ no purge method, all other samples collected by purge (3-Volume) method.

italicized indicates most recent data

- Indicates an exceedance of an SCG.
- Indicates a detection.
- RI/FS Remedial Investigation/Feasibility Study.
- NYSDEC New York State Department of Environmental Conservation.
- EPA Environmental Protection Agency
- SCGs Standards, criteria, and guidance values.
- ug/L Micrograms per liter.
- Not analyzed.
- < 5 Compound not detected above its laboratory quantification limit.
